

## HVAC LINE CARD

### Power Distribution Blocks

#### Zero Torque (ZT)

Featuring push-in load terminals, Zero Torque Power Distribution Blocks eliminate the need for torque tools, simplifying installation and ensuring consistent, reliable connections. Ideal for HVAC systems where quick and secure wiring is essential.

- 85-175 Amps
- Up to 600 Volts

#### Open Splicer and Distribution

With high ampacity and versatile voltage compatibility, Open Splicer and Distribution Blocks efficiently distribute power in HVAC systems. They are perfect for applications requiring multiple load outputs from a single input.

- 115-2,280Amps
- Up to 600 Volts

#### Enclosed Splicer and Distribution

The enclosed and modular design of these blocks provides touch-proof protection and flexibility, making them suitable for high-voltage HVAC applications. They ensure safety and ease of installation.

- 115-760 Amps
- Up to 1,000 Volts

### Fuse Holders

#### Class J

Compact and featuring high short-circuit current ratings (SCCR) with finger-safe protection, Class J Fuse Holders are designed for reliability and safety in demanding HVAC environments. They are ideal for protecting circuits with high fault currents.

- 30-600 Amps
- 250-600 volts

#### Class T

Designed for fast-acting, current-limiting fuses with high interrupting ratings, Class T Fuse Holders offer enhanced safety with snap-on covers. They are perfect for applications requiring quick response to overcurrent conditions.

- 30-600 Amps
- 300-600 Volts

#### Class CC

Offering IP20 finger-safe protection and tool-free fuse change-outs, Class CC Fuse Holders provide a compact and reliable solution for HVAC systems. They are ideal for protecting branch circuits with limited space.

- 30-60 Amps
- 600 Volts

### Fused Disconnect Switches

#### Class J

Combining circuit breaker functionality with the high protection level of a fuse, the Class J Fused Disconnect Switch offers high interrupting ratings and easy installation. It is perfect for HVAC systems requiring reliable circuit protection and disconnection.

- 30-60 Amps
- Up to 600 Volts AC / 125 DC

#### Class CC

Providing branch circuit protection with high short-circuit withstand ratings and IP20 finger-safe protection, the Class CC Fused Disconnect Switch ensures safety and reliability in HVAC applications. It is ideal for compact installations.

- 30 Amps
- Up to 600 Volts AC / 125 Volts DC

Since 1965, Marathon® Special Products has offered a broad range of power distribution blocks, terminal blocks, fuse holders, and the expertise to develop custom products.

**HVAC - Industrial Controls - Utility - Datacenters**  
**EV/Sustainable Transportation - Renewables - Institutional Construction**

#### QUALITY

Quality is a way of life at Marathon Special Products and over the years, we have earned a reputation for quality and reliability. The majority of our products have been tested to applicable standards through UL product certifications. View our certifications at [www.marathonsp.com/quality-certifications.php](http://www.marathonsp.com/quality-certifications.php).

#### SERVICE

Our dedicated engineers, customer service representatives, and other industry experts work closely with our customers to understand their unique requirements and challenges. This collaborative approach allows us to develop tailored solutions that optimize performance, increase efficiency, and maximize safety.

#### INNOVATION

We understand the critical role of power distribution and electrical connections in various industries. That's why we have assembled a comprehensive portfolio of products, designed to provide efficient, safe, and dependable solutions for even the most demanding applications. View our industries served at [www.marathonsp.com/industries.php](http://www.marathonsp.com/industries.php).
