

DATE: June 1st, 2023  
SUBJECT: PRODUCT OBSOLESCENCE NOTIFICATION  
132 Series Adder Options

As part of our product line simplification initiatives, Marathon Special Products will be discontinuing the “adder” option of our 132 Series power blocks that allows a partial terminal to be snapped onto an existing single, double or three pole version. Single, double and three pole versions remain active.

This affects all active and existing parts noted in the tables below. This product discontinuance is due to the low use of these versions, that are all functionally covered by the single pole of the same group/series. Single poles can be ganged together, or added onto an existing single, double or three pole version.

The alternatives listed below are functional replacements, with very little change to the overall fit. Additionally, it should be noted that in early 2024, the depth of this series will increase around .50 inches to upgrade the UL rating from recognized to Listed.

**This change is effective 9/30/23. Your internal specifications and/or agency files may need to be updated to reflect this. All last time buys must be in hand by August 31<sup>st</sup> 2023.**

Please feel free to email or call with any questions regarding this product modification.
